

Monkeypox Virus (MPXV) Environmental Swab Test

The whole world is still under the threat of pandemic. Not only the long existence of the COVID-19, but also overseas countries are **subject to the spread of the monkeypox virus**. The first imported case had been reported in HK recently. Monkeypox can be **transmitted from person to person through sexual contact, respiratory droplets and body fluids**. It can also be **transmitted by in touch with infected fabrics (clothing, bedding or towels), daily necessities and touching surfaces that have been used by the patients**. Therefore, hotels, beauty salons, gyms, swimming pool and sauna baths are potentially high-risk venues.

To proactively prevent the widespread of the infectious disease, STC is excited to announce that we are now offering the test on MPXV. We are **the 1st non-medical laboratory in Hong Kong to offer fast and accurate testing service of MPXV**. In order to prepare for the relaxation of travel and entry restrictions in the near future, STC is strongly recommended that **hotels, beauty salons, club managements and pets-related industries** test the high-risk venues or objects regularly. Customers can then safely enjoy the facilities and services provided by your industries.
